

5 of your most pressing telephony questions answered

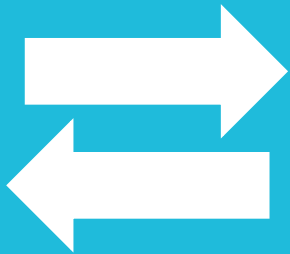

1. Why do I need a new telephone system?

New hardware removes the need for hefty fix costs on old systems, you'll have a futureproof solution ahead of the 2025 ISDN BT end-of-life deadline and, best of all, there's no large upfront price tag.

2. Will implementation of a new system cause a lot of downtime?

Switchover takes approximately 30 seconds per number, meaning implementation has minimal impact and downtime.

3. Can I take my numbers with me?

Absolutely. We have porting arrangements with all major carriers and ways we can transfer from other networks.

4. Can you have good call quality on a cloud phone system?

Don't worry - there's no risk of sounding like a Dalek on the phone. When a cloud phone system is deployed using the correct connectivity, we can guarantee voice quality.

5. Will we need to go full-on Madonna and wear a headset 24/7?

Only if you want to! We can deploy softphones (accessed via your PC) physical phones that sit on your desk and there's even an app for your mobile.
