

## Moving forward with Microsoft Dynamics NAV

Holchem is the UK's leading hygiene technology solutions company, delivering innovative chemical cleaning solutions to its customers across the UK.

### The Challenge

Holchem was on a classic Dynamics NAV client, and support was running out for that version – Microsoft Dynamics NAV 2009.

The company wanted to upgrade to the current Dynamics NAV 2016, and use the 2009 end-of-life as an opportunity to use the additional functionalities of the latest version.

This upgrade will allow Holchem to move forward as a business by using the latest innovative Microsoft technologies. Cloud-based Dynamics NAV 2016 also gives Holchem the flexibility to access it on any device, anywhere.

### The Solution

TSG is currently in the process of upgrading Holchem's NAV system to Dynamics NAV 2016.

Following the upgrade, Holchem will have access to better tools and a streamlined system.

In addition to implementing the upgrade, TSG is providing workshops to Holchem to ensure staff will be getting the most out of NAV. This will also help Holchem streamline its internal processes in line with NAV's functionalities, to increase productivity.

Following the upgrade, TSG will be supporting Holchem to implement NAV in other areas of the business, as well as incorporating its owned companies including Merlin.

*"We've worked with TSG for a few years and we knew it was the best consultant for our business."*

*"The NAV workshops will add value that nobody else could offer us, thanks to TSG's expertise."*
