

TSG Case Study: Prasco

NAV

Microsoft
Dynamics

Integration with key insurance industry systems

Prasco UK Ltd is an importer and distributor of crash repair parts to the automotive industry. Distributing to re-sellers and directly through a number of insurer contracts, Prasco supplies to approved automotive industry repair centres.

The Challenge

Prasco turned to TSG for the development and implementation of a solution to handle all core processes and procedures, helping to improve communication and visibility of business critical data around the organisation.

As the business continued to grow, a key aim was to save time and increase staff productivity in order to achieve more without adding significantly to the overhead.

The Solution

Microsoft Dynamics NAV was chosen as a strong and robust platform to address the company's immediate requirements, with the flexibility to meet longer term goals.

Significant advances have been made with the use of mobile devices in stock management, proof of delivery and cash collection.

Most importantly TSG has integrated Prasco's Dynamics NAV solution with the key estimating systems utilised by the insurance trade, delivering seamless solutions to the end users and making the adoption of supply schemes straightforward.

"Much of our growth in the last few years has been down to being able to provide a full and comprehensive solution to some of the UK's leading motor insurers."

"I would readily recommend TSG as a business partner. TSG offers a comprehensive service and has the expertise to understand and provide a complete IT solution for any business."
